FTSE Crypto US Listed Index

About the index

The FTSE Crypto US Listed Index tracks the performance of the top 10 by market cap weight of individual digital assets excluding stable coins that are eligible for inclusion if they meet the generic listing standards established by NYSE Arca applicable to passively-managed crypto asset exchange-traded products (ETPs) registered with the Securities and Exchange Commission (SEC). This ensures the index includes only assets with established market access and regulatory oversight. Designed to provide broad and diversified exposure to the crypto market, the index includes only those assets that meet minimum market capitalization and liquidity thresholds. Constituents are weighted by the square root of market capitalization—based on circulating supply and price—to achieve a proportional balanced representation.

Eligible constituents must be part of the FTSE Digital Asset Universe and have an established FTSE DAR Reference Price, which is based on high-quality data from vetted digital asset exchanges meeting standards for governance, regulatory compliance, and technical integrity.

The index is published daily Sunday to Friday at 4pm EST and reviewed and rebalanced quarterly to reflect the evolving nature of the digital asset landscape.
