

FTSE Americas GDP Weighted Indices

Data as at: 31 March 2025

The FTSE GDP Weighted Index Series is designed to reflect the performance of constituent companies in an index where country weightings are proportionate to each country's forecast GDP. The indices comprising the FTSE GDP Weighted Index Series consist of the constituents of the corresponding underlying universe of the FTSE All-World Index Series at the time of the annual review in March (but may differ between reviews due to intra-review additions to the underlying index).

FEATURES

Methodology

The five year GDP forecasts at Purchasing Power Parity (PPP) published by the International Monetary Fund (IMF) in September prior to the annual review date determine the country weightings in each GDP weighted index.

Objective

The indices are designed for the creation of index tracking funds, derivatives and as a performance benchmark.

Investability

Stocks in the underlying universe are free-float weighted to ensure that only the investable opportunity set is included.

Liquidity

Stocks in the underlying universe are screened to ensure that the indices are tradable.

Capping

Constituent weights are capped at 5% at the annual review.

Transparency

The indices use a transparent, rules-based construction process. Index Rules are freely available on the FTSE website.

Availability

The indices are calculated based on price and total return methodologies, available end-of-day. Net TRI versions of the indices are also available.

Industry Classification Benchmark

Index constituents are categorized in accordance with the Industry Classification Benchmark (ICB), the global standard for industry sector analysis.
