

FTSE Advanced Climate Risk-Adjusted EMU Government Bond Index

Sovereign | Single-Currency

The FTSE Advanced Climate Risk-Adjusted EMU Government Bond Index (Advanced Climate EGBI) measures the performance of fixed-rate, local currency, investment-grade sovereign bonds in the FTSE EMU Government Bond Index (EGBI) incorporating a tilting methodology that adjusts index weights according to each country's relative exposure to climate risk, with respect to resilience and preparedness to the risks of climate change. The country climate scores are derived by assessing each country's relative climate risk across three core climate change pillars (each with multiple sub-indicators):

- Transition Risk: Evaluates countries' carbon footprint relative to its peers and its Nationally Determined Contributions (NDCs) Implied Temperature Rise (ITR).
- Physical Risk: Assesses countries' historical exposure and vulnerability in 2050 to seven climate hazards, from an economic perspective.
- Resilience: Measures countries' preparedness to tackle climate change based on institutional, economic, societal, and ecological factors.

Countries are scored relative to the cohort, across each of the pillars with a single combined score derived for each country. Country scores are then used to reweight the country's exposure in the index to provide higher exposures to countries that are more resilient to climate change risks and lower exposures to countries that are more exposed to climate change risks.
