

# Russell 1000 Pure Single Target Exposure Factor Indexes

Data as at: 29 March 2024

The Russell 1000 Pure Single Target Exposure Factor Indexes are comprised of securities within the Russell 1000 Index and track the performance of five recognized factors – Quality, Value, Momentum, Low Volatility and Size, each of which is supported by academic research, with strong theoretical explanations as to why the factor historically has provided a premium. The Russell 1000 Pure Single Factor Target Exposure Indexes follow a consistent and transparent construction methodology in order to achieve controlled exposure to their targeted factor while avoiding any off-target factor exposure and respecting levels of diversification and capacity. The indexes also seek to maintain market, industry and country neutrality. FTSE Russell's factors represent common factor characteristics supported by a body of empirical evidence across different geographies and time periods.
