Launched in 2001, the FTSE4Good Index Series is a series of benchmark and tradable indexes for ESG (Environmental, Social and Governance) investors. The index series is derived from the FTSE Global Equity Index Series and is a tool for investors seeking to invest in companies that demonstrate good sustainability practices. It also supports investors that wish to encourage positive change in corporate behavior and align their portfolios with their values. The FTSE4Good criteria is applied to the FTSE Developed Index Series and the FTSE Emerging Index Series, which cover over 23 developed countries and 20 emerging countries. FTSE Russell has also partnered with a number of stock exchanges to create partnership indexes with the FTSE4Good criteria.

Criteria are developed using an extensive market consultation process and are approved by an independent committee of experts. A broad range of stakeholders help shape the criteria, including NGOs, governmental bodies, consultants, academics, the investment community and the corporate sector. To remain consistent with market expectations and developments in ESG practice, the inclusion criteria are revised regularly. FTSE Russell engages with companies that no longer meet the standards and they are given a period of grace to try and improve their scores. If there is no improvement then the company is deleted from the index series. The criteria have been designed to help investors minimise ESG risks. Companies with the largest risk and impacts have to meet additional sector specific criteria.

FEATURES

**Transparency**

Index governance is overseen by the independent FTSE Russell ESG Advisory Committee, made up of leading global responsible investment market practitioners and experts on global Environmental, Social and Governance (ESG) principles and criteria used to determine comparative corporate ESG performance.

**Criteria**

Companies need to meet a variety of environmental, social and governance criteria to meet the inclusion requirements – please see www.ftserussell.com for details

**Objective**

The indexes are designed for use in the creation of index tracking funds, derivatives and as performance benchmarks.

**Investability**

Stocks are selected and weighted to ensure that the indexes are investable.

**Liquidity**

Stocks are screened to ensure that the indexes are tradable.

**Availability**

The indexes are calculated based on price and total return methodologies, both real time and end-of-day.

**Industry Classification Benchmark (ICB)**

Index constituents are categorized in accordance with the Industry Classification Benchmark (ICB), the global standard for industry sector analysis.
