

Russell 1000 Minimum Variance Index

Data as at: 29 July 2022

The Russell 1000 Minimum Variance Index is designed to minimise the volatility of the Russell 1000 Index based on historical return information, thereby offering potential improvements to the risk reward trade-off of the index.

Additional constraints on the weight of a single stock (<4.5%) and the weight of an individual ICB Industry (<20%) ensure the index is investable and diversified.
