

FTSE China 30/18 Capped Index

Data as at: 28 February 2025

FTSE Russell UCITS Capped Indexes are market-capitalization weighted indexes designed to limit concentration in any single security as part of the Undertakings for Collective Investment of Transferable Securities (UCITS) diversification requirements for European Union registered funds. The indexes are a subset of the FTSE Global Equity Index Series (GEIS), which covers 99% of the world's investable market capitalization.

FTSE China 30/18 Capped Index represents the performance of Chinese large and mid capitalisation stocks. The index has a broad coverage of Chinese share classes include A Shares, B Shares, H Shares, Red Chips, P Chips, S Chips and N Shares, where the A Share constituents are available to international investors through Northbound China Stock Connect Scheme, eligible under the scheme's Buy-And-Sell List. The index constituents are weighted by free float, restrictions applied to foreign investors, and reviewed semi-annually. To limit over concentration in any single security, constituents are capped quarterly so the largest company's weight does not exceed 30% and any remaining company weight does not exceed 18%.
