Introduction

1.0 Introduction

1.1 The FTSE MTS Index Structure

1.1.1 FTSE MTS Indexes are a set of benchmarks for the European sovereign bond market. The indexes are calculated and distributed by FTSE Russell, using pricing data from the MTS platform. All quotes made on the consolidated inter-dealer platform are live and tradable to member dealers. Additionally, market data from the order book is widely distributed via data vendors.

1.2 The FTSE MTS Macro-Weighted Eurozone Government Bond Index Series does not take account of ESG factors in its index design.

1.3 IOSCO

1.3.1 FTSE International Limited (FTSE) considers that the FTSE MTS Macro-Weighted Eurozone Government Bond Index Series (the Index Series) meets the IOSCO Principles for Financial Benchmarks as published in July 2013.

Full details can be accessed at www.iosco.org.

Details of FTSE Russell’s Statement of Compliance with respect to the IOSCO Principles can be accessed using the following link:

IOSCO Statement of Compliance.

1.4 FTSE Russell hereby notifies users of the index series that it is possible that circumstances, including external events beyond the control of FTSE Russell, may necessitate changes to, or the cessation of, the index series and therefore, any financial contracts or other financial instruments that reference the index series or investment funds which use the index series to measure their performance should be able to withstand, or otherwise address the possibility of changes to, or cessation of, the index series.

1.5 Index users who choose to follow this index series or to buy products that claim to follow this index should assess the merits of the index’s rules-based methodology and take independent investment advice before investing their own or client funds. No liability whether as a result of negligence or otherwise is accepted by FTSE Russell nor its group companies (or any person concerned with the preparation or publication of these Ground Rules) for any losses, damages, claims and expenses suffered by any person as a result of:

- any reliance on these Ground Rules, and/or
- any errors or inaccuracies in these Ground Rules, and/or
• any non-application or misapplication of the policies or procedures described in these Ground Rules, and/or
• any errors or inaccuracies in the compilation of the Index or any constituent data

1.6 These Ground Rules

1.6.1 This document sets out the Ground Rules for the construction and management of the FTSE MTS Macro-Weighted Eurozone Government Bond Index Series.

1.7 FTSE Russell

1.8 Index Series Objectives

1.8.1 The FTSE MTS Macro-Weighted Eurozone Government Bond Indexes are designed to reflect the performance of the Eurozone Sovereign Bond market, with the market value weights of countries adjusted by their economic fundamental scores. The indexes are transparent and designed to be replicable.

1.9 Publication of Index and Underlying Data

FTSE MTS Indexes are published in real time between 09:00 CET and 17:15 CET, with three snapshots at 11:00 CET, 16:00 CET and 17:15 CET. Bond prices used for the 11:00, 16:00 and 17:15 CET snapshots are published on the website. Real time bond prices sourced directly from the MTS platform are available from data vendors. These bond prices are distributed with a higher frequency than the 30 second index updates. The Underlying index composition and weights are published on the FTSE MTS Index website.

1.10 The base currency of the benchmark is EUR.

1.11 FTSE MTS Macro-Weighted Eurozone Government Bond Index Series

1.11.1 The FTSE MTS Eurozone Government Bond Index Series comprises the following indexes:

• FTSE MTS Highest Rated Macro-Weighted Government Bond Index
• FTSE MTS Macro-Weighted Eurozone Government Bond IG Index

1.11.2 The FTSE MTS Highest Rated Macro-Weighted Government Bond Indexes consist of Eurozone sovereign indexes based on issuers with the highest credit ratings grouped by maturity. The Eurozone indexes (together with the maturity sub-indexes) were launched in October 2011 and each index has a history of index values back to 31 December 1998.

1.11.3 The FTSE MTS Macro-Weighted Eurozone Government Bond IG Index is comprised of bonds from Eurozone issuers with at least two investment grade ratings from the three main credit rating agencies. It was launched in March 2012 and has a simulated history of index values back to 31 December 1998.

1.12 Price and Total Return indexes

1.12.1 Price and Total Return indexes are calculated.

1.12.2 Total Return Index: Coupons paid by any bond index constituent are reinvested overnight in the index. No deduction is made before a coupon is reinvested in the index i.e. no withholding tax is applied.
1.13 **Index Analytics**

1.13.1 In addition to capital and total return index values, the following index analytics are also calculated:

- Average Coupon
- Average Yield to Maturity
- Average Time to Maturity
- Average Macaulay Duration
- Average Modified Duration
- Average Convexity

1.14 **Index Calculation**

The indexes are calculated on every day that is not a TARGET2 payment system holiday and is a MTS market trading day. The calculation of the index and associated index analytics will use a T+2 settlement convention.
Section 2

Management Responsibilities

2.0  Management Responsibilities

2.1  FTSE International Limited (FTSE)

2.1.1  FTSE is the benchmark administrator of the index series.¹

2.1.2  FTSE Russell is responsible for the daily calculation, production and operation of the FTSE MTS Macro-Weighted Eurozone Government Bond Index Series and will:

- maintain records of all the constituents;
- be responsible for the addition and deletion of bonds and changes of nominal amounts, in accordance with the Ground Rules.

2.2  FTSE EMEA Fixed Income Advisory Committee

2.2.1  The FTSE EMEA Fixed Income Advisory Committee has been established by FTSE Russell. The Committee may recommend changes to the Ground Rules for approval by the FTSE Russell Product Governance Board.

2.2.2  The Terms of Reference of the FTSE EMEA Fixed Income Advisory Committee are set out on the FTSE Russell website and can be accessed using the following link:

FTSE_EMEA_Fixed_Income_Advisory_Committee.pdf

2.3  Amendments to these Ground Rules

2.3.1  These Ground Rules shall be subject to regular review by FTSE Russell to ensure that they continue to best reflect the aims of the index series. Any proposals for significant amendments to these Ground Rules will be subject to consultation with the FTSE EMEA Fixed Income Advisory Committee and other stakeholders if appropriate. The feedback from these consultations will be considered by the FTSE Russell Product Governance Board before approval is granted.

2.3.2  As provided for in the Statement of Principles for FTSE Fixed Income Indexes, where FTSE Russell determines that the Ground Rules are silent or do not specifically and unambiguously apply to the subject matter of any decision, any decision shall be based as far as practical on the Statement of Principles. After making any such determination, FTSE Russell shall advise the market of its decision at the earliest opportunity. Any such treatment will not be considered as an exception or change to the

¹ The term administrator is used in this document in the same sense as it is defined in Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the European Benchmark Regulation).
Ground Rules, or to set a precedent for future action, but FTSE Russell will consider whether the Rules should subsequently be updated to provide greater clarity.

2.4 Market Disruption

2.4.1 If the value of one or more constituents is not published due to a suspension or a market disruption event, the index will be calculated taking the latest intra-day value, if available. If an intra-day value is unavailable the previous end of day value will be used.

2.5 Interruption of Live Pricing from MTS Platform

2.5.1 The FTSE MTS Indexes are calculated based on executable bids and offers sourced from the MTS inter-dealer platform. The MTS platform is not controlled by FTSE Russell and should the platform be unable to disseminate live prices for any reason, the FTSE MTS Indexes will not be updated during that period. Index users who choose to follow the FTSE MTS Indexes should be aware of this possibility and make suitable contingency arrangements.
Section 3

FTSE Russell Index Policies

3.0 FTSE Russell Index Policies

These Ground Rules should be read in conjunction with the following policy documents which can be accessed using the links below:

3.1 Queries and Complaints

FTSE Russell's complaints procedure can be accessed using the following link:

Benchmark_Determination_Complaints_Handling_Policy.pdf

3.2 Guide to the Calculation Methods for the FTSE Fixed Income Indexes

3.2.1 For a description of the methodology used to calculate the index and bond level analytics, please consult the Guide to Calculation Methods for FTSE Fixed Income indexes, which can be found using the following link:

FTSE_Fixed_Income_Index_Guide_to_Calculation.pdf

3.3 Statement of Principles for FTSE Fixed Income Indexes (the Statement of Principles)

Indexes need to keep abreast of changing markets and the Ground Rules cannot anticipate every eventuality. Where the Ground Rules do not fully cover a specific event or development, FTSE Russell will determine the appropriate treatment by reference to the Statement of Principles for FTSE Fixed Income Indexes which summarises the ethos underlying FTSE Russell's approach to index construction. The Statement of Principles is reviewed annually and any changes proposed by FTSE Russell are presented to the FTSE Russell Policy Advisory Board for discussion before approval by the FTSE Russell Product Governance Board.

The Statement of Principles for Fixed Income Indexes can be accessed using the following link:

3.4 FTSE MTS Pricing Methodology Guide

3.4.1 For further information, please see the FTSE MTS Pricing Methodology Guide which is available using the following link:

FTSE MTS Pricing Methodology Guide
3.5 Recalculation Policy and Guidelines

The Recalculation Policy and Guidelines for Fixed Income Indexes document is available from the FTSE Russell website using the link below or by contacting info@ftserussell.com.

Fixed_Income_Recalculation_Policy_and_Guidelines.pdf

3.6 Policy for Benchmark Methodology Changes

3.6.1 Details of FTSE Russell’s policy for making benchmark methodology changes can be accessed using the following link:

Policy_for_Benchmark_Methodology_Changes.pdf
Section 4

Eligibility Criteria

4.0 Eligibility Criteria

4.1 Eligible Bonds

<table>
<thead>
<tr>
<th></th>
<th>FTSE MTS Highest Rated Macro-Weighted Government Bond Index</th>
<th>FTSE MTS Macro-Weighted Eurozone Government Bond IG Index</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>Quoted on the MTS Platform</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Nominal, fixed coupon bullet-maturity bonds with no embedded options or convertibility</td>
<td></td>
</tr>
<tr>
<td>Currency</td>
<td></td>
<td>EUR</td>
</tr>
<tr>
<td>Minimum Credit Rating</td>
<td>No less than two AAA ratings from the three main ratings agencies: Fitch, Moody's and S&amp;P</td>
<td>No less than two investment grade ratings from the three main ratings agencies: Fitch, Moody's and S&amp;P</td>
</tr>
<tr>
<td></td>
<td>Sovereign government bonds issued by the following Eurozone countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Portugal, Slovenia and Spain</td>
<td>Investment grade is the rating BBB- or higher by Fitch and S&amp;P and Baa3 or higher by Moody's</td>
</tr>
<tr>
<td>Minimum Outstanding Amount</td>
<td></td>
<td>€2 billion</td>
</tr>
<tr>
<td>Minimum Remaining Time to Maturity</td>
<td>Greater than 1 year, defined as the difference between the maturity of the bond and the rebalance effective date</td>
<td></td>
</tr>
<tr>
<td>First Settle Day</td>
<td>Bonds must have a first settle date on or before the selection day, as defined in Section 5 – Index Rebalancing</td>
<td></td>
</tr>
</tbody>
</table>

The FTSE MTS Highest Rated Macro-Weighted Government Bond Index comprises a **minimum of five issuers**. Where a credit rating downgrade of an existing eligible issuer would result in the number of eligible issuers falling below this minimum, the issuer in question will remain an eligible issuer until a new issuer becomes eligible to replace it.
Section 5

Price Sources

5.0 Price Sources

5.1 FTSE MTS Indexes use live quotes from the MTS inter-dealer platform. Each bond quoted on the MTS platform is supported by multiple dealers supplying continuous quotes.

Index values are calculated using best bid prices. New bonds entering an index for the first time use the best offer price, to reflect the bid-offer spread experienced by market participants attempting to track the index.

Select indexes are also calculated using mid-prices to value existing index constituents. However, in order to reflect bid-offer spreads, new constituents will be added to the index at the ask price, and ineligible bonds will leave the index at the bid price. All mid-prices are calculated as the arithmetic average of the respective bid and offer price pair.

5.2 The prices used to update the indexes are taken from the MTS market in real time. Prior to being used in the index calculation, the prices are subject to a multi-step verification process which aims to remove stale or off-market prices. The verification procedure includes:

- Comparing the bid and offer spreads against country thresholds;
- Comparing price movements in individual bonds against pre-defined thresholds.

Any price that successfully completes the verification process is referred to as the Last Good Price (LGP) and is subsequently used in the index calculation. In the event that the verification process disqualifies all prices for a particular bond the LGP is used, until a new price is available.

5.3 For further information, please see the FTSE MTS Pricing Methodology Guide which is available using the following link:

FTSE MTS Pricing Methodology Guide
Section 6

Index Rebalancing

6.0 Index Rebalancing

6.1 Monthly Rebalancing

6.1.1 The FTSE MTS Macro-Weighted Eurozone Government Bond Index Series is rebalanced monthly. Eligible bonds are determined using market data at 17:15 CET on the first day following the 15th day of the month that is both a TARGET2 business day and a MTS market trading day (the Selection Day).

6.1.2 The monthly rebalance is effective at the open of the first business day of the month.

6.1.3 In the event that no Eligible Bonds are available at the monthly rebalance, the current index constituents will be maintained until a new bond(s) becomes eligible at a subsequent monthly rebalance.

6.2 Country Weights

6.2.1 Country weightings are initially based on each eligible countries’ share of aggregate eligible Gross Domestic Product (GDP). Initial country weightings are then further adjusted using the four macroeconomic metrics shown in the table below.

<table>
<thead>
<tr>
<th>Data</th>
<th>Metric</th>
<th>Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gross Domestic Product (GDP)</td>
<td>--</td>
<td>Eurostat</td>
</tr>
<tr>
<td>Government Debt (as a percentage of GDP)</td>
<td>Negative</td>
<td>Eurostat</td>
</tr>
<tr>
<td>Current Account Balance (as a percentage of GDP)</td>
<td>Positive</td>
<td>OECD</td>
</tr>
<tr>
<td>Quarter-on-quarter GDP Growth</td>
<td>Positive</td>
<td>Calculated from the GDP data</td>
</tr>
<tr>
<td>Long-term Interest Rates$^2$</td>
<td>Negative</td>
<td>OECD</td>
</tr>
</tbody>
</table>

6.2.2 Each metric is calculated as the average quarterly value over the most recent eight quarters. If any data is unavailable, the data from the previous quarter is used$^3$. Any data that was missing in the previous quarter, if now available will be taken into account. This will not impact previous quarter’s weightings. Revisions to the indicators are not taken into account.

6.2.3 For each country a share of GDP in the total GDP for the whole group is calculated. This gives an initial weight for each country’s GDP $^\text{Initial \cdot Weight}$

$^2$ Generally 10 years as defined by the OECD

$^3$ For example, if the average is being calculated at the end of Q4 2015 and the Q4 value is not available then Q3 2015 is used for Q4. Thus, the 8 quarters will be Q1 2014, Q2 2014, Q3 2014, Q4 2014, Q1 2015, Q2 2015, Q3 2015 and Q3 2015
6.2.4 Each individual country’s initial weight is then adjusted using a set of macroeconomic indicators (i.e. Government Debt, Current Account Balance, Q-on-q GDP growth and Long-term Interest Rates). For each macroeconomic indicator, the average of the last 8 quarters is taken, which is subsequently standardized using the Z-score formula:

\[
Z = \frac{x - \mu}{\sigma}
\]

where:
- \(x\) is a raw score to be standardized per country;
- \(\mu\) is the mean of the population, i.e. all selected issuing countries as per the selection criteria;
- \(\sigma\) is the standard deviation of the population, as described above for \(\mu\).

6.2.5 The standardized scores are multiplied by +1 or -1 depending on whether the metric is considered positive or negative (as indicated in the table above). The sum of data for one indicator for all countries per quarter should be equal to 0.

**Example**

**Calculating the Z-score.**

In Q1 2015, the Government Debt (as a % of GDP) data for countries A, B and C were as follows:

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>97.5</td>
<td>74.4</td>
<td>109.7</td>
</tr>
</tbody>
</table>

The mean and standard deviation of the population are:

\[
\mu = \frac{97.5 + 74.4 + 109.7}{3} = 93.9
\]

\[
\sigma = \sqrt{\frac{(97.5-93.9)^2 + (74.4-93.9)^2 + (109.7-93.9)^2}{3}} = 17.9
\]

Government Debt is a negative metric, therefore Z-score for the Government Debt indicator of the 3 countries needs to be negative as well:

\[
Z_{\text{DebtA}} = \frac{97.5 - 93.9}{17.9} \times (-1) = -0.202659
\]

\[
Z_{\text{DebtB}} = \frac{74.4 - 93.9}{17.9} \times (-1) = 1.08581
\]

\[
Z_{\text{DebtC}} = \frac{109.7 - 93.9}{17.9} \times (-1) = -0.883148
\]

Note that \(Z_{\text{DebtA}} + Z_{\text{DebtB}} + Z_{\text{DebtC}} = 0\).

6.2.6 The final Z-score for each country is obtained by taking an average of the four standardized macroeconomic indicators. It is subsequently used as an adjustment factor to the initial GDP share for each country, \(\text{GDP}_{\text{Initial Weight}}\), using the below formula:

\[
CW_c = \text{GDP}_{\text{Initial Weight}} \times \left(1 + \frac{Z}{10}\right)
\]
where:

\[ CW_c \] is the weight of a country \( c \).

**Example**

**Applying an adjustment factor.**

Country A has a 3.9% share in the total GDP of a group of countries, as well as the Government Debt Z-score as in the example above. To adjust the GDP weighting by the Z-score, the below formula is used:

\[
CW_A = \frac{\text{GDP}_{\text{Initial Weight}} \times \left( 1 + \frac{Z_{\text{DebtA}}}{10} \right)}{3.9\% \times \left( 1 + \frac{-0.202659}{10} \right) = 3.820963\%}
\]

Since the above macroeconomic indicator is a negative metric, the final country weighting is lower than the initial GDP weighting.

The resulting weight distribution for each country \( c \), \( CW_c \), is normalized to add up to exactly 100%.

Final country weightings are referred to as “Macro-adjusted GDP weights” and constitute country weights in the all maturity index and all sub-indexes for which all issuers are eligible.

### 6.3 Bond Weights

The weight \( W_i \) of each Selected bond \( i \) is determined using data from 11:00 CET on the first business day following the 15th day of the month immediately preceding the effective month. This time is denoted \( t_0 \). All weights are published to 3 decimal places. Bond eligibility and selections are established by applying the relevant criteria for each index at the same time \( t_0 \).

\[
W_i = W_j^* \times \frac{(Cp_i[t_0] + AI_i[t_0]) \times N_i[t_0]}{\sum_j(Cp_j[t_0] + AI_j[t_0]) \times N_j[t_0]}
\]

where:

- \( W_j^* \) is the weight of a country \( j \) (the issuer of bond \( i \));
- \( Cp_i[t_0] \) is the quoted clean price of Eligible Bond \( i \) at \( t_0 \);
- \( AI_i[t_0] \) is the accrued interest;
- \( N_i[t_0] \) is the nominal amount of Eligible Bond \( i \) outstanding on day \( t_0 \);

where the summation in the denominator is over all Eligible Bonds issued by all Eligible countries.
Appendix A: Further information

A Glossary of Terms used in FTSE Russell’s Ground Rule documents can be found using the following link: Fixed_Income_Glossary_of_Terms.pdf

For further information on the FTSE MTS Macro-Weighted Eurozone Government Bond Index Ground Rules please visit www.ftse.com/products/mts or e-mail info@ftserussell.com.
