Section 1

Purpose of the Guide

1.0 Purpose of the Guide

1.1 The aims of the guide are:

1. to describe how the liquidity test is conducted;

2. to make it easier for users to replicate the liquidity test in order to support their investment and trading activities.
Section 2
Liquidity Screening Process

2.0 Liquidity Screening Process

2.1 With reference to FTSE GEIS liquidity rule 6.3:

A. Each security will be tested for liquidity semi-annually in March and September
   a. For the March review liquidity will be tested from the first business day of January to the last business day of December of the previous year.
   b. For the September review liquidity will be tested from the first business day of July of the previous year to the last business day of June of the current year.

   Security volume data will be taken on trading days from Monday to Sunday (where applicable) when markets are open.

B. Each security will be tested for liquidity by calculation of its median daily trading per month.

C. When calculating the median of daily trades per month a minimum of 5 trading days in each month must exist, otherwise the month will be ignored and not used in the count. The liquidity test will be applied on a pro-rata basis where the testing period is less than 12 months. Please refer to Appendix A.

D. The median trade is calculated by ranking each daily trade total and selecting the middle ranking day.

E. Daily totals with zero trades are included in the ranking; therefore a security that fails to trade for more than half of the days in a month will have a zero median trade.

F. Only exchange trading days will be included in the calculation i.e. exchange holidays will be excluded.

G. Periods of suspension will not be included in the test.

H. For newly eligible securities where testing period is less than 12 months, the liquidity test will be applied on a pro-rata basis.

I. The percentage parameters may be adjusted by up to 0.01% at a market review so that, in FTSE’s opinion, the index better reflects the liquid investable market.

   Any adjusted percentage parameters will be maintained until the next semi-annual review.
J. Trading volume:
In the event that a company fails the liquidity test based on its underlying shares, and the company has an equivalent Depositary Receipt (DR) then the DR may be considered for inclusion in the index if it passes the liquidity test in its own right and is traded on an exchange within a similar regional time-zone as the underlying shares.

Where a company has both DR and underlying shares listed, both lines will be tested separately for liquidity. The underlying share will be included as long as they pass the liquidity test in their own right. The DR will only be eligible for inclusion if the underlying shares fail the liquidity test and the DR passes in its own right.

Where the DR has been included it will remain in the index until such time it either fails the liquidity test or the underlying shares pass the liquidity test for two future consecutive reviews.

Sources of Trading Venue: Refer to Appendix A in the Global Equity Index Series Ground Rules.

K. Trading Screen
Existing and non-constituent securities which have not traded on 60 or more trading days during the past year (up to and including the review cut-off date), will not be eligible for (continued) index inclusion. Regular/ad-hoc market holidays, and unscheduled market closures will not count towards the total; otherwise, the reason(s) for a security’s non-trading will not be considered. If a security does not have a full year of trading, the 60 day period will be pro-rated according to the number of available trading days passed since its listing. Please note:

- All standard trading days will be incorporated within the calculation (Friday and Sundays as appropriate)
- Ad-hoc non-standard trading days will not be incorporated within the calculation (e.g. ad-hoc Saturday trading will not be considered)
- Where a pro-rata calculation is necessary, the number of available trading days on the underlying market during the previous year up to and including the review cut-off date will be used as the basis of the calculation. E.g. Market ABC has 253 available trading days for the annual period to the review cut-off date; therefore the security would not be eligible if for 23.7% (60/253) or more of its available trading days since listing, it did not trade.
- A security which has been removed from an index as a result of this screen will only be reconsidered for inclusion after a period of 12 months from its deletion. For the purposes of index eligibility it will be treated as a new issue.

2.2 New issues (including those subject to FTSE Nationality rules)
- All newly listed companies will be screened as per Appendix B
- Companies must have a minimum trading record of at least 3 months prior to the cut-off date of the review.
- New issues into the Global All Cap Index must pass 10 out of 12 months with a monthly median turnover of at least 0.05%* of their shares in issue (after the application of any investability weightings**) based on their median daily trade each month ***, on a pro-rata basis since their listing.
- New issues into the Global Micro Cap Index must pass 10 out of 12 months with a monthly median turnover of at least 0.025%* of their shares in issue (after the application of any investability weightings**) based on their median daily trade each month ***, on a pro-rata
basis since their listing.

Notes:

* subject to adjustment as per 2.1(i).

** When testing liquidity the investability weight as at the last date in the testing period will be used for the calculation for the whole of that period.

*** When calculating the median of daily trades per month a minimum of 5 trading days in each month must exist, otherwise the month will be ignored and not used in the count. For clarification purposes, daily totals with zero trades are included. Therefore the month will be tested and included in the count even where a stock has 10 trading days of which 6 are zero trades.

- A new issue that fails the liquidity test will not be eligible for inclusion to the FTSE GEIS Index Series until the next semi-annual review.

- The liquidity test will be applied on a pro-rata basis where the testing period is less than 12 months. As an example, if Company A passes 5 out of 6 months it will be considered to have passed the test as this equates to passing 10 out of 12 months. Refer to Appendix A.

2.3 Existing constituents

- Existing Global All Cap Index constituents need to pass 8 out of 12 months with a monthly median turnover of at least 0.04%* of their shares in issue (after the application of any investability weightings**).

- Existing Global Micro Cap Index constituents need to pass 8 out of 12 months with a monthly median turnover of at least 0.02%* of their shares in issue (after the application of any investability weightings**).

Notes:

*subject to adjustment as per 2.1(i).

** When testing liquidity the investability weight as at the last date in the testing period will be used for the calculation for the whole of that period. However where FTSE Russell have become aware that an existing index constituent has had a change in Foreign Ownership Limit (FOL) during the testing period and the investability weight is equal to the FOL, then the FOL at the end of the month will be used for the calculation.
Section 3

Liquidity Calculation Method

3.0 Liquidity Calculation Method

3.1 For each month the daily trading volumes, as a percentage against that security’s free float adjusted shares, are ranked and the median value selected.

Example Calculation of Daily Trading Volume %:
Company A has 40m shares in issue, a free float of 50% and a daily trading volume of 20,000 shares.

Daily volume (%) = daily trading volume / free float adjusted shares
= 20,000 / 20,000,000 = 0.1%

Please Note:
- When testing liquidity the free float weight as at the last date in the testing period will be used for the calculation for the whole of that period.
- Shares in issue used for the calculation is that as of the date of volume traded.

3.2 Monthly Median Liquidity Test
The tables below illustrate the ranking of the daily trading volumes % and the calculation of the median monthly value.
The example assumes that there is an even number of days in the month
Step 1: Daily traded volume (%)

Step 2: Daily traded volume (%) - RANKED

Monthly median (%) = \frac{10^{\text{th}} + 11^{\text{th}} \text{ day}}{2}

= \frac{0.025\% + 0.03\%}{2} = 0.0275\%

## Appendix B: FTSE GEIS Liquidity-Test Cases

<table>
<thead>
<tr>
<th>Test case</th>
<th>Liquidity Test</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPO</td>
<td><strong>Fast Entry</strong> Not Applicable</td>
</tr>
<tr>
<td></td>
<td><strong>Non Fast Entry</strong> At the next quarterly review after a minimum 3 month trading period from first day of unconditional dealing to index review cut-off date</td>
</tr>
<tr>
<td>Nationality review</td>
<td><strong>Existing Constituent</strong> Not Applicable – Nationality change becomes effective at the quarterly review following date of FTSE notice confirming nationality change</td>
</tr>
<tr>
<td></td>
<td><strong>Non Constituent</strong> At the next semi-annual review following a minimum three month trading period from date of FTSE notice confirming nationality change to index review cut-off date</td>
</tr>
<tr>
<td></td>
<td>For clarification purposes, this would include a nationality change from a Frontier market (non-FTSE GEIS eligible) to an Emerging market (FTSE GEIS eligible). For the purposes of the liquidity test, historical trading volume data prior to the FTSE notice confirming nationality will be disregarded.</td>
</tr>
<tr>
<td>Former constituent</td>
<td><strong>resumption of trading following suspension</strong> At the next semi-annual review following a minimum three month trading period from the 12 month anniversary deletion date* to the index review cut-off date.</td>
</tr>
<tr>
<td></td>
<td><strong>removed from Exchange alert board</strong> At the next semi-annual review following a minimum three month trading period from the 12 month anniversary deletion date* to the index review cut-off date.</td>
</tr>
<tr>
<td></td>
<td><strong>continuous trading and a float greater than 5% following completed takeover</strong> At the next semi-annual review following a minimum three month trading period from the 12 month anniversary deletion date* to the index review cut-off date.</td>
</tr>
</tbody>
</table>

*For illustration purposes, if a constituent was deleted on 21 September 2015 it would only be re-considered for inclusion at the semi-annual index review which falls after 21 September 2016 (i.e. March 2017), having fulfilled the minimum 3 month trading period as at the review cut-off date (31 December 2016).

Please note: When calculating the median of daily trades per month a minimum of 5 trading days in each month must exist, otherwise the month will be ignored and not used in the count. The liquidity test will be applied on a pro-rata basis where the testing period is less than 12 months. Refer to Appendix A
